Algebra 1 Direct Variation Answer
The equation $y=4x+1$ represents a linear function. When you input values of x , you get an output answer or y . To make a table, enter values of x and solve for y . A typical table may look like this: X Y-3 -11-2 -7-1 -3. 0 1. 1 5. 2 9. 3 13. To make a graph of the function, first sketch your x and y axis.

Ok, suppose you had a question such as "Model each rule with a table of values and a graph. If the rule describes a direct variation, state the constant of the variation." And if there was a problem like this: $y=4x+1$ How would you make a table and graph for it? I am so confused, because my book doesn't explain anything about doing this! I've been looking for how to get this done, but I'm stuck!
