These attractive features and the demonstration of numerous synthetic applications have spurred the development of intriguing asymmetric reaction strategies during the last decade. An impressive variety of chemo-, regio- and stereoselective carbon–carbon and carbon–heteroatom bond forming reactions with ynamides have been developed and now significantly enrich the toolbox of synthetic chemists.

Abstract. Chiral phosphoric acid-catalyzed asymmetric aldehyde prenylation has been established using an α,β -dimethyl allyl boronic ester. The transformation provides expedient access to a wide array of aryl, heteroaryl, aryl-substituted alkenyl and primary and secondary aliphatic homoprenyl alcohols with excellent asymmetric induction. The utility of this asymmetric catalysis strategy has been demonstrated through a short and efficient total synthesis of the two natural products ...

Enantioselective synthesis, also called asymmetric synthesis, is a form of chemical synthesis. It is defined by IUPAC as: a chemical reaction in which one or more new elements of chirality are formed in a substrate molecule and which produces the stereoisomeric products in unequal amounts. Put more simply: it is the synthesis of a compound by a method that favors the formation of a specific enantiomer or diastereomer. Enantiomers are stereoisomers that have opposite configurations at every chira

Another synthetic application of EDDS lyase was demonstrated by the biocatalytic asymmetric synthesis of various N-arylated L-aspartic acids and the chemoenzymatic synthesis of challenging 2-aryl-5-carboxylpyrazolidin-3-ones (Figure 5).¹⁹ Especially, pyrazolidinones are widely found as core structures in pharmaceutically active molecules including lipoxygenase inhibitors (Figure 4) and anti-Alzheimer agents.¹⁹ EDDS lyase accepted a broad range of arylamines and ...

The research described herein focuses on the synthesis of chiral pinene-pyridine derivatives, and their application in asymmetric catalysis. Both transition metal catalysed and organocatalytic transformations were investigated. Chiral pyridine-phosphines based on α -pinene were synthesised and applied as efficient P,N-ligands for the enantioselective palladium(II)-catalysed Baeyer-Villiger ...
