As the central concept of Darwin's theory of evolution, natural selection implies that the fittest survive and spread their traits through a population. This concept is called the survival of the fittest. The fitness implied is reproductive fitness; that is, the ability to survive in the environment and propagate the species.

~~Theory of Evolution - CliffsNotes~~

Evolution is a variation in the heritable features of biological groups over succeeding generations (Darwinism). Evolutionary processes contribute advancement in biodiversity at every level of biological organization, including the levels of species, individual organisms, and molecules. In this article, we will go over top 10 evolution news in 2017.
