Secondly, the course highlights clinically relevant anatomy, showing you key clinical and surgical correlations. Thirdly, the course will help you understand how the various interconnected spaces in the head and neck are related and allow you to see how neurovascular structures pass through these regions. Most importantly, the course aims to develop your spatial awareness and allow you to visualize the anatomy in your mind's eye.

The head and neck is a region especially complex in structure, containing some of the most important organs as well as major nerves and blood vessels. An understanding of local anatomy is fundamental to a wide variety of medical and surgical specialties, many of which involve some of the most demanding-and newest-techniques in microsurgery.

The head rests on the top part of the vertebral column, with the skull joining at C1 (the first cervical vertebra known as the atlas). The skeletal section of the head and neck forms the top part of the axial skeleton and is made up of the skull, hyoid bone, auditory ossicles, and cervical spine. The skull can be further subdivided into:
