Typical damage symptoms are severed or ragged leaves and damage at the stem bases. Cereals may also suffer damage to the seed, resulting in bare patches within the crop. The leatherjacket grubs can usually be found adjacent to damaged plants just below the soil surface.

Cereal Pests and Diseases - SAC Technical Notes & Photo ...
The heavily illustrated publication covers hundreds of crop pests (including beetles, bugs, aphids, flies, moths, butterflies and nematodes) known to affect one or more of the following crops – cereals, oilseeds, vegetable brassicas, potatoes, carrots, alliums, peas, field beans, sugar beet and lettuce. For each pest, the latest information on the importance of the pest to cropping is presented as well as information on identification, risk factors, life cycle, monitoring, control ...

Encyclopaedia of pests and natural enemies | AHDB
Brassica crops are liable to all manner of pests and diseases. A common disease, Rhizoctonia solani, or "damping off", affects seedlings, often causing death, resulting in a poor crop take. It is a pathogenic fungus with a wide host range. This disease particularly affects brassicas, because it is known to cause "wire stem".

Weeds, Pests and Diseases in grass and forage crops
Crop diseases. Plant diseases are a significant yield and quality constraint for growers of broadacre crops in Western Australia. Plant pathogens can be fungal, bacterial, viral or nematodes and can damage plant parts above or below the ground. Identifying symptoms and knowing when and how to effectively control diseases is an ongoing challenge for WA growers of cereals (wheat, barley, oats and triticale), pulses (field pea, chickpea, faba bean), canola and lupin crops.

Crop diseases | Agriculture and Food
2020 cereal disease management Cereal diseases will need proactive management during 2020 as there will be high levels of stubble-borne inoculum following limited breakdown over the summer. The dry conditions during early summer will reduce the risk posed by rust and aphid spread viruses due to the limited green bridge, however, this may change if rainfall events continue in the lead up to sowing.

Cereal disease guide | Grain, pulses and cereal diseases ...
Pests Wireworm, zabrus, rose-grain aphids and cecidomyiidae (or gall gnats) can cause much damage to cereal crops and affect overall yield.
