When CK-666 was washed out, the cells stopped blebbing and resumed lamel-lipodial protrusion by first passing through a transient stage of filopodia formation (Fig. S1 A). An alternative Arp2/3 complex inhibitor, CK-869, also induced membrane blebbing in cells. As in the case of CK-666, this transition also included an intermedi-

Some aspects of the catalytic mechanism of the serine proteases were submitted to ab initio RHF MO studies at a 3 21G basis set level. Analytical gradients were used to optimize the geometry of the molecular partners and to sense the interactions among them when they make up for the active site in chymotrypsin. Reaction fields of graded strengths were used to sense the response of the active ...
