Why does music have such a powerful effect on our minds and bodies? It is the most mysterious and most tangible of all forms of art. Yet, Anthony Storr believes, music today is a deeply significant experience for a greater number of people than ever before. In this book, he explores why this should be so.

Designed for a general audience, Music and the Mind explores the power of music as it relates to health and the brain. Topics include childhood development, cognitive neuroscience, evolution, music therapy and the impact on healthcare, the impact of music education, music and social cohesion, and the future of music in medicine.

~~Music and the Mind - Renée Fleming~~

Music can alter brain structure and function, both after immediate and repeated exposure, according to Silbersweig. For example, musical training over time has been shown to increase the connectivity of certain brain regions. "If you play an instrument like the violin," he said in a recent Zoom interview, "the areas in your brain that are associated with the frequencies of the violin are ...

~~Music and the Brain | Neurobiology~~

Music consists of a sequence of tones, and perception of it depends on grasping the relations between sounds. Many areas of the brain are involved in processing the various components of music....

~~Music And The Brain - Scientific American~~

"Music and the Brain" explores how music impacts brain function and human behavior, including by reducing stress, pain and symptoms of depression as well as improving cognitive and motor skills, spatial-temporal learning and neurogenesis, which is the brain's ability to produce neurons.

~~Music and the Brain: What Happens When You're Listening to ...~~

One of the ways music affects mood is by stimulating the formation of certain brain chemicals. Listening to music increases the neurotransmitter dopamine. Dopamine is the brain's "motivation molecule" and an integral part of the pleasure-reward system.

The 18 music lovers in this study, rigged up to an EEG, reported when they felt a chill coming on. More than 300 hair-raising, goosebump-making chills were recorded, each lasting roughly 9 seconds on average. But looking at the EEG readings, the researchers were able to detect other chills outside of these predicted moments as well. And some people's results had to be excluded from the ...

We can usually pick if a piece of music is particularly happy or sad, but this isn't just a subjective idea that comes from how it makes us feel. In fact, our brains actually respond differently to happy and sad music. Even short pieces of happy or sad music can affect us.

~~8 Amazing, Little Known Ways Music Affects the Brain~~

Responses to music are easy to be detected in the human body. Classical music from the baroque period causes the heart beat and pulse rate to relax to the beat of the music. As the body becomes relaxed and alert, the mind is able to concentrate more easily. Furthermore, baroque music decreases blood pressure and enhances the ability to learn.
