The most common
photochemical process on
Earth is photosynthesis.

Read Book Photochemical
Photoelectrochemical And
Photobiological Processes
Vol. Solar Energy Randd In
The Ec Series D.V.1

Life on Earth mainly depends on the process of photosynthesis. In this process, plants can convert the energy from sunlight into stored chemical energy via forming carbohydrates (using carbon dioxide and water from the atmosphere). Also, this process releases oxygen to the atmosphere.

Read Book Photochemical Photoelectrochemical And Photobiological Processes Von Solar Energy Randd In The Ec Series D V 1

The photoelectrochemical and photobiological processes are those that must be developed in order to meet the long-term energy requirements. Today's systems are less than 1 percent efficient (solar to hydrogen) and they need to reach much higher efficiencies to be economical. Also, there are no large-scale installations of either technology.
